

O&O BlueCon 20: Repair of damaged Windows systems with O&O Check & Repair

Berlin, February 28, 2023

O&O Software presents the latest version 20 of O&O BlueCon, an extensive collection of powerful tools to restore damaged Windows systems. From the deactivation of incorrect drivers to the restoration of deleted data, this product offers all the options that an administrator or IT service provider needs.

The most important innovation in O&O BlueCon 20 is the integration of O&O Check & Repair, a tool to search for why a system no longer starts. In the first step "Check", the system files and components are checked for missing or damaged files and/or registration key. "Repair" then tries to automatically correct these errors. If this step is not successful, the current version 20 of O&O BlueCon offers further information, including the log files.

The creation of the bootable rescue medium was completely revised in O&O BlueCon 20 and simplified again. With just a few clicks, the start medium is created and ready for use. New is the integration into a separate rescue environment, so that the primary recovery environment can continue to exist without changes. Any integrated drivers can also be utilized.

The current version supports Windows 11, Windows 10, and Windows Server 2022, 2019, 2016 and all integrated programs start directly from USB stick or from a network environment via PXE boot. O&O BlueCon can be started directly from the Windows boot menu or directly from the USB stick or CD without prior installation.

A further highlight in O&O BlueCon is the integrated O&O DriverLoader, which automatically discovers all system components and loads the corresponding drivers. If a driver for special hardware is not available, the user can integrate it into the current system with just a few mouse clicks so that it receives full access to this device.

O&O BlueCon is available in two editions: Admin Edition and Tech Edition. Both are also available as a "Plus Edition" with the Backup and Recovery solution O&O DiskImage. The Admin Edition is person-bound and can be used on all computers within a company. The Admin Edition Plus contains O&O DiskImage to backup and restore data. The Tech Edition allows use in the context of services provided within a company or externally. It is licensed per Technician and can be used to repair any number of computers. The Tech Edition Plus contains O&O DiskImage to backup and restore data.

About O&O Software

O&O develops solutions for corporate customers that not only support them in their daily activities, but also help substantially reduce their costs. Our products for system optimization, data imaging, data recovery, secure data deletion and company-wide administration are pioneers in the Windows technology sector. Together with our worldwide network of partners, we support corporations,

companies, public authorities and private customers in over 140 countries, all from our headquarters in Berlin, Germany.
